

(a) Flow Matching Endpoint Decoding

$$e_t(a, b) = (1 - t)a + tb$$

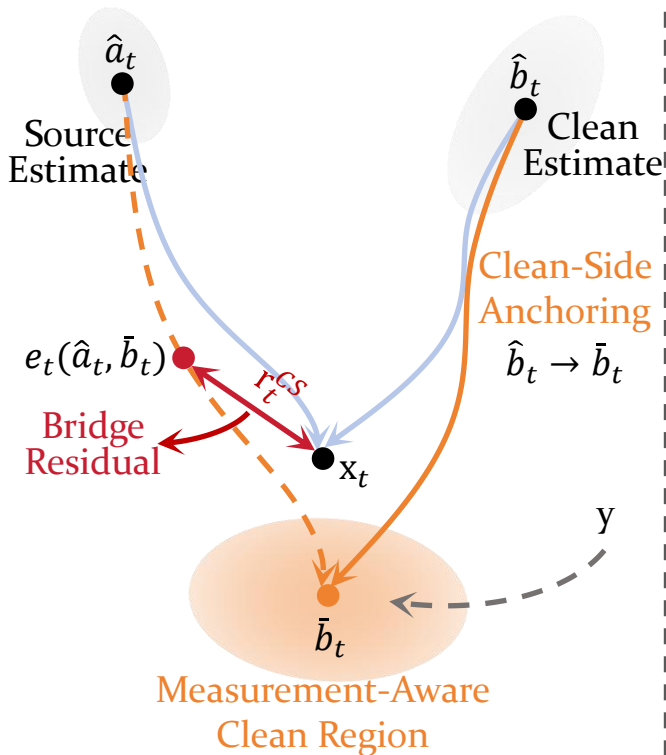

Local Endpoint Decoding

$$\hat{a}_t = x_t - tv_\theta(t, x_t)$$

$$\hat{b}_t = x_t + (1 - t)v_\theta(t, x_t)$$

(b) Clean Side Only Correction Breaks the Bridge

(c) ReBridge-Flow (Ours)
